

# Annual Reauthorization of Educational Competencies and Measurable Objectives

---

(This policy supersedes the policy of the same title approved by the EPC, 09-17-08)

Approved by the EPC: June 16, 2010

The *Educational Competencies and Measurable Objectives* for the ArizonaMed program serve as the broad template upon which all other curricular goals and processes are defined. To ensure these objectives reflect the most current educational needs with respect to medical practice, they should be reviewed regularly and systematically. This policy establishes that process.

## Policy:

1. Annually, near the end of the academic year, the EPC shall review the *Educational Competencies and Measurable Objectives for the Program Leading to the MD degree*. If no changes are made, those documents will be reported to the General Faculty as an appendix to the Annual Report of the committee.
2. If changes to the *Educational Competencies* are required, those changes will be proposed to the General Faculty for approval. In the case of disapproval by the General Faculty, the last approved version of the Educational Competencies will remain the standing policy.
3. Because the *Measurable Objectives* interpret the Educational Competencies for expression into the curriculum, those objectives may be modified as required by the EPC and published accordingly to the General Faculty.
